RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 100 pages. Original publisher: East Hartford, CT : United Technologies Research Center : Cleveland, Ohio : National Aeronautics and Space Administration, Lewis Research Center, 1986 OCLC Number: (OCoLC)673430976 Excerpt: . . SECTIONII-FUELCHEMICAALNDSPRAYPROPERTIES order to determine the effect of fuel chemical properties on soot loading within a combustor, tests were conducted with four fuels which offered a significant range in chemical properties. The four fuels used in these tests were Jet A, ERBS (Experimental Referee Broad Specification), ERBLS-2 (60/40 (vol) blend of ERBS and BLS (blending stock)), and XTB (Xylene Tower Bottoms). Jet A, which is a high-quality petroleum-derived fuel produced in accordance with ASTM and USAF specifications, is commonly used in gas turbine engines. ERBS fuel evolved from a NASA-directed workshop on alternative hydrocarbon fuels (Ref. 2). Unlike most fuel specifications, which place upper limits on certain chemical properties, a single level (and tolerance) of hydrogen content is specified for ERBS. This approach minimizes the chemical property variation of subsequent batches of ERBS production. ERBS has become a standard fuel for NASA-sponsored fuel-effects investigations. XTE is a specialty product consisting of various single-ring aromatic compounds (alkylbenzenes) and has been used in other fuel effects tests. BLS is a mixture of XT and a gas oil that NASA had obtained to use for modification of fuel properties, and contains single-ring and double-ring aromatic compounds. The Jet A and TB fuels were procured by UTRC while the ERBS and BLS fuels were provided by NASA. UTRC blended the ERBLS-2 fuel in the following manner. The volume fraction specifications were translated to mass fractions. A...
